

An R-Squared for Multivariate Outcomes

by Tommy Jones and Mark J. Meyer

Abstract An abstract of less than 150 words.

Introduction

Introductory section which may include references in parentheses (?), or cite a reference such as ? in the text.

A geometric interpretation of R^2

This section may contain a figure such as Figure 1.

Figure 1: The logo of R.

The `mvrSquared` package

There will likely be several sections, perhaps including code snippets, such as:

```
x <- 1:10  
plot(x)
```

Use cases

R^2 for probabilistic topic models

Second use case

Third use case

Summary

This file is only a basic article template. For full details of *The R Journal* style and information on how to prepare your article for submission, see the [Instructions for Authors](#).

About this format and the R Journal requirements

`rticles::rjournal_article` will help you build the correct files requirements:

- A R file will be generated automatically using `knitr::purl` - see <https://bookdown.org/yihui/rmarkdown-cookbook/purl.html> for more information.
- A tex file will be generated from this Rmd file and correctly included in `RJwrapper.tex` as expected to build `RJwrapper.pdf`.
- All figure files will be kept in the default `rmarkdown*_files` folder. This happens because `keep_tex = TRUE` by default in `rticles::rjournal_article`
- Only the bib filename is to be modified. An example bib file is included in the template (`RJreferences.bib`) and you will have to name your bib file as the tex, R, and pdf files.
